7. ☒ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other _____.

The following is an examiner's statement of reasons for allowance: The two alternative secondary references, Ubukawa *et al.* (JP 5-62,712) and Tsushima *et al.* (US 6,294,292), have been withdrawn for reasons stated by applicants. Ubukawa *et al.* was indicated as disclosing a ratio of cathode to anode capacity between 1:1 and 1:1.3, which would correspond to a ratio of anode to cathode capacity of 0.77 to 1. While this would appear to fall within the present claims, Ubukawa *et al.* identify LiMnO_2 as an "anode", reacted against a lithium electrode, which would be the cathode. Thus, their nomenclature is reversed from the American convention, which would call LiMnO_2 the cathode. In American terms, Ubukawa *et al.* disclose cells with a anode to cathode capacity ratio of between 1:1 and 1:1.3, which would fall outside the present range. Tsushima *et al.* disclose a double-layer capacitor, and thus not a battery cell.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The Abstract has been rewritten as follows, so as to appear as a single paragraph:

--The present invention is drawn to a high power electrochemical energy storage device in a bipolar configuration, comprising at least n stackable cells in bipolar configuration wherein

subgroups of m cells are electronically monitored. The storage cells have a lithium ion insertion anode and a lithium ion insertion cathode, a separator, an electrolyte system, and a leak-proof seal structure. A number of embodiments are disclosed, characterized by a favorable range of m values, in combination with the anode-to-cathode capacity ratio, electrolyte conductivity, and other battery key features, thereby providing a high power device providing long cycle life and excellent power performance over many thousand charge and discharge cycles while minimizing the cost for electronic monitoring. Additionally, the present invention is drawn to a device combining two or more groups of stackable cells in bipolar configuration, either in series or in parallel or any combination thereof, so as to create a high power, high voltage energy storage device.--

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because: It does not identify the citizenship of each inventor. Only the citizenship inventor Desilvestro has been identified.
